INTERACTIVE PROTOTYPE CREATION

GitHub Project Documentation

Build a clickable prototype to simulate real app interactions, test user flows, and refine the design using feedback.

Figma / InVision • Interactive Prototyping • Navigation • User Testing

1. Task Overview

This project focuses on converting static wireframes into a clickable interactive prototype that simulates real application interactions and navigation.

Task Tutorial

https://youtu.be/-d6zNGeF59M?si=YFFibY8KlQXQFdMG

2. Key Features / Activities

Activity	Purpose
Convert Wireframes	Transform existing wireframes into interactive prototype screens using Figma or InVision.
Animations & Transitions	Add interactions, animations, transitions, and navigation between screens.
User Testing	Conduct quick user testing to observe how users interact with the prototype.
Feedback Collection	Gather feedback from users and identify areas that need improvement.
Design Refinement	Refine the prototype and interface based on testing results and feedback.

3. Suggested Prototype Creation Process

Step 1 — Prepare Wireframes

Review the existing wireframes and identify the screens and user actions that need to be connected.

Step 2 — Create Interactive Connections

Connect buttons, menus, links, and screens to represent the intended navigation flow.

Step 3 — Add Interactions

Add suitable animations, transitions, and interaction behaviors to make the prototype feel realistic.

Step 4 — Test the Prototype

Perform quick user testing to check whether users can understand and complete the intended flow.

Step 5 — Gather Feedback

Record user observations and feedback about navigation, interactions, and overall experience.

Step 6 — Refine the Design

Use the feedback to improve screens, interactions, navigation, and the overall prototype.

4. Expected Outcome

Learn how to present and test interactive designs effectively by creating clickable prototypes, simulating user flows, conducting quick user testing, and refining designs from feedback.

5. Suggested GitHub Repository Structure

```
interactive-prototype-creation/

■■■ wireframes/
■■■ prototype-screens/
■■■ interactions/
■■■ user-testing/
■■■ feedback/
■■■ design-refinements/
```

6. GitHub Submission Checklist

✓ Project documentation PDF

✓ Original wireframes

✓ Clickable prototype screens / prototype link

✓ Navigation and interaction flows

✓ Animations and transitions

✓ User testing notes

✓ Collected feedback

✓ Refined prototype/design

✓ README.md with project overview and process
